CURARE

School Partnership Info Pack

Jayson Chaw[1]

[1]*Taylor's International School Kuala Lumpur, Kuala Lumpur, Malaysia*

Hello. Thanks for checking Curare out. This pack provides everything your institution needs to know to run a pilot or adopt Curare into your curriculum. I kept it short and practical so you can forward it to admins.

Executive Summary

Curare is a clinician reviewed, teacher ready medical and science curriculum for students aged 7-18. It is built as a full curriculum replacement for biology and applied science lessons. Curare includes lesson plans, teacher guides, assessments, certificates, classroom tech, and pilot reporting designed for easy school implementation.

This will cover pilot options, roles and responsibilities, timeline, what we deliver, data and privacy, a sample MOA summary, and the next steps to get started.

Why schools pick Curare

- Replaces standard science class biology content that meets learning objectives.
- Turnkey teacher resources so teachers do not need to build lesson materials from scratch.
- Clinician oversight and simple reporting for parents and leadership.
- Low friction pilot setup and measurable outcomes so you can evaluate the impact of your lessons.

Pilot options (what we offer)

1. Free 4 week pilot

- Up to 1 group (30 student seats)
- Teacher onboarding session and quick start guide.
- Module 0 orientation assigned by default.
- Basic progress reporting: activation, avg session time, retention, pre/post quiz gain.
- Email support.

2. Paid pilot

- Up to 3 groups (90 student seats)
- Full teacher training session and follow up support.
- Custom module assignment and deeper analytics dashboard.
- Dedicated support channel.

3. Sponsored pilot (unavailable)

- Unlimited seats for a sponsored rollout.
- Custom curriculum mapping and advanced analytics.
- Priority support and implementation consultation.

Pilot flow (what to expect)

Week 0

- The school confirms participation and provides a signed pilot agreement.
- Teachers get access keys and create classrooms.
- Parents receive a consent template and submit (signed) to your organization.

\

Week 1

- Students complete Module 0 orientation.

- The teacher monitors activation and helps students sign up.

Weeks 2 to 3

- Students work through lessons at their own pace.
- Teachers can assign optional quizzes (based on your own curriculum).

Week 4

- Students take the post-quiz.
- Curare produces a one-page results summary.

Pilot Report

A clean one-page report showing:

- Number of activated students.
- Average time spent learning.
- Pre vs post quiz scores and simple learning gain.
- Short teacher feedback summary.

This is easy to share with parents and school leadership.

School Responsibilities

What we need from the school:

- Provide one teacher as the main contact.
- Distribute the classroom code to students and parents.
- Collect parent consent (template provided).
- Give short feedback at pilot end.

Curare will handle onboarding, activation support, and the final report.

Data and Privacy

- We collect minimal PII: student name and parent email for consent and communication.
- Parent consent is required for minors before activation.
- Data is encrypted at rest and can be deleted on request.
- No behavioural tracking beyond quiz and session time metrics.

Pricing

- Free pilot: up to 30 students.
- Paid pilot: up to 90 students (small fee for additional support).
- Full rollout pricing will be discussed after a successful pilot.

We will not negotiate enterprise terms until we have pilot results.
